

Assistance to Firefighters Grant Program (AFG)

Preserve funding for the Assistance to Firefighters Grant Program
AFG is key to equipping adequately the nation's first responders and ensuring a high level of protection against fires, natural disasters, terrorism, and other emergencies across the United States.

The Assistance to Firefighters Grant (AFG) program was established by Congress in 2001 to assist communities in equipping our nation's first responders, including firefighters and EMS personnel. Through AFG, local fire departments may apply for grants to purchase new and needed equipment, much of which replaces older, outdated equipment that no longer meets standards established by the National Fire Protection Association (NFPA). AFG provides funding to equip firefighters and other first responders, helping to provide a universal level of protection across the United States, and ensuring public safety. The Federal Emergency Management Agency (FEMA) administers the grants in cooperation with the United States Fire Administration (USFA).

Through the FEMA program, fire departments of all sizes purchase personal protective equipment clothing (PPE), self-contained breathing apparatus (SCBA), personal alert safety system (PASS) devices, fire apparatus, and other essential safety and response equipment. AFG is extremely important to every state's first responders.

FAMA and FEMSA: Fire Apparatus Manufacturers' Association (FAMA) and Fire and Emergency Manufacturers and Services Association (FEMSA) represent "the industry that helps first responders save lives" by manufacturing and supporting

lifescaping equipment utilized by first responders. Member companies are predominately U.S.-based, employ 107,919 U.S. workers, and tend to be small and medium-sized businesses.

Authorization: In 2018, Congress reauthorized the AFG program for six years at \$750 million (plus inflation), beginning in FY 2018, through FY 2023. Twenty-five percent of annual grant funds must be awarded to volunteer, career, and "combination" fire departments each; an additional 10% of funds are available for open competition among all three categories of departments; 10% of funds must be awarded to fire prevention and safety organizations; 3.5% of funds must go to EMS; and 2% may go to non-affiliated EMS organizations. Congress also reauthorized the SAFER (hiring) program and the U.S. Fire Administration. In 2023, the AFG and SAFER programs are up for reauthorization again.

Efficient and effective: AFG is one of the most efficiently-run and effective programs in the federal government. Funds are distributed directly to local fire departments. Bureaucracy is minimal and local community benefit is paramount.

America's fire service: In 2019, the nation's fire and rescue services responded to 37.3 million calls to protect the public. These firefighters and EMS personnel serve as the

backbone of the nation's first response capabilities for both natural disasters and potential terrorist attacks. As the population ages and expands, this number is expected to increase significantly.

In 2018, the nation had approximately 1.1 million fire and rescue personnel, with over 745,000 (67%) of these serving as volunteers. Without such service, the nation's response capability would be seriously compromised and no longer universal, serving all communities.

AFG at a glance

Established:
2001

Authorized at \$750 million (plus inflation):
Through FY 2023

FY2021 appropriation:
\$360 million

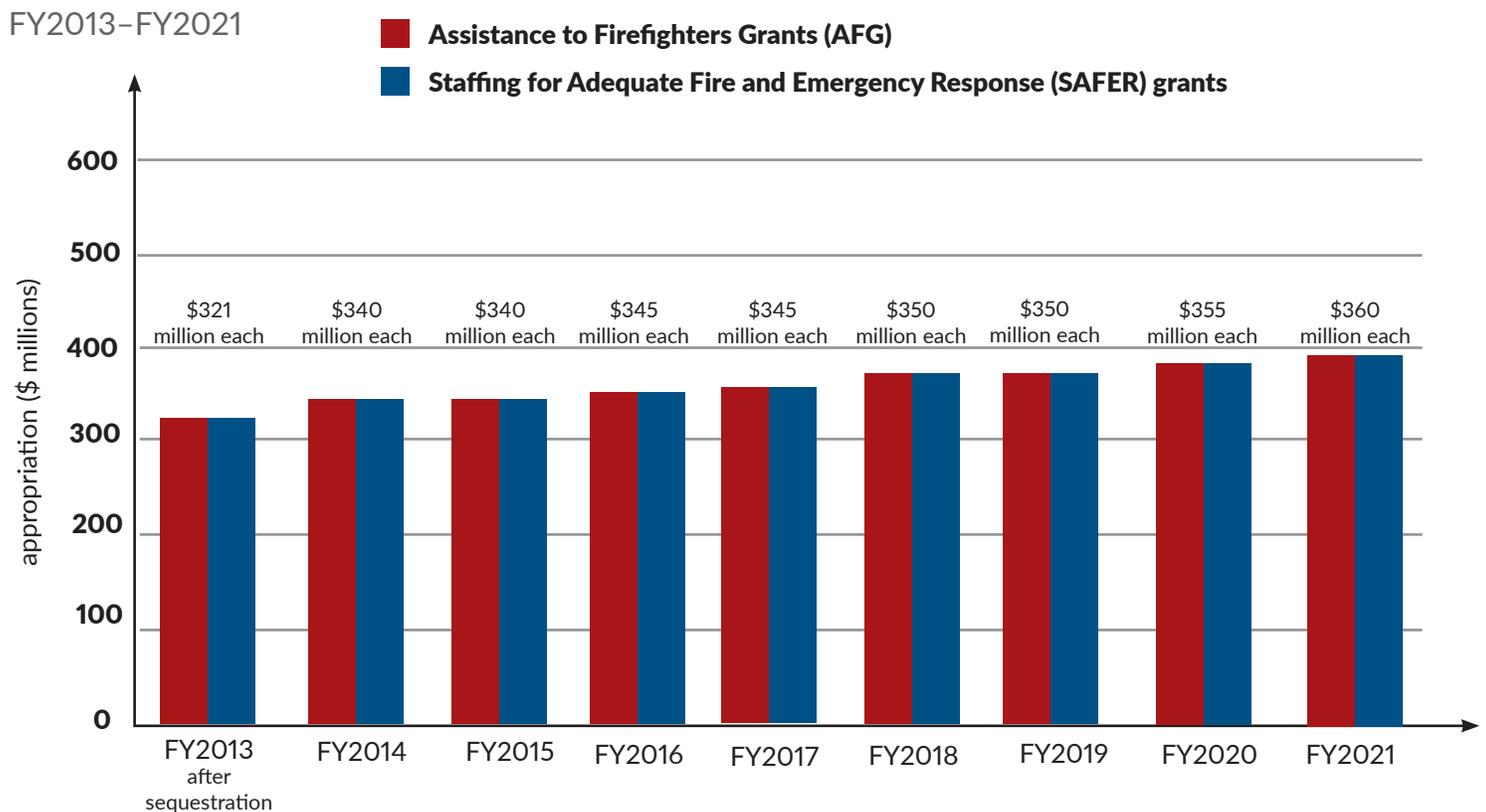

Administered by:

Supports:
Purchase of personal protective equipment, self-contained breathing apparatus, personal alert safety system, fire apparatus and other vehicles, and more

1.1 million first responders

AFG & SAFER Appropriations Funding

*2020 Figures do not include the \$100 million in AFG funding provided through the CARES Act to combat COVID-19. The 2021 figures do not include the \$100 million in AFG and \$200 million for SAFER in the American Rescue Plan to combat COVID-19.

FAMA and FEMSA support FY2022 funding at the fully authorized level of \$750 million each (plus inflation) for AFG & SAFER

Responding to COVID-19 and Future Disasters

As America's first responders continue to combat the COVID-19 Pandemic, they face personal health risk while their departments are threatened by fiscal pressures, furloughs, and layoffs. This comes at a time when they are needed most for COVID-19 response, and as the intensity of storms and natural disasters continues to grow.

In 2020 alone, there were 22 disasters in the U.S. that caused over \$1 billion in damage. Together, these disasters caused \$95 billion worth of damage in 2020. To put this in perspective, from 1980-1989, disasters of this magnitude cost the U.S. \$17.8 billion per year on average. The frequency and cost of large-scale disasters in the U.S. is expected to rise dramatically in the coming years, and it will be the responsibility of our nation's fire service to help respond to them.

As our first responders continue to fulfill their role to locally execute the nation's response to COVID-19 and other disasters, it is critical that AFG funding is expanded to support them in meeting the nation's emergencies.

Meeting the Needs of First Responders

The Assistance to Firefighters Grant Program (AFG) helps over 1.1 million firefighters throughout the United States meet their baseline equipment needs and plays a critical role in the nation's emergency response capabilities.

Since the program's inception in 2001, AFG has remained critical in supporting our nation's fire service. However, as first responder responsibilities increase, more work must be done to expand the AFG program to meet their needs.

Source: NFPA: [Fourth Needs Assessment of the U.S. Fire Service](#)

53% of all fire departments cannot equip all firefighters on a shift with self-contained breathing apparatus (SCBA), up from 52% in 2010.

49% of departments have not formally trained all of their personnel involved in structural firefighting, up from 46% in 2010.

55% of all fire departments responsible for emergency medical services (EMS) have not formally trained all of their personnel up from 48% in 2010.

72% of all departments have at least one piece of personal protective clothing that is 10 years old, up from 63% in 2010.

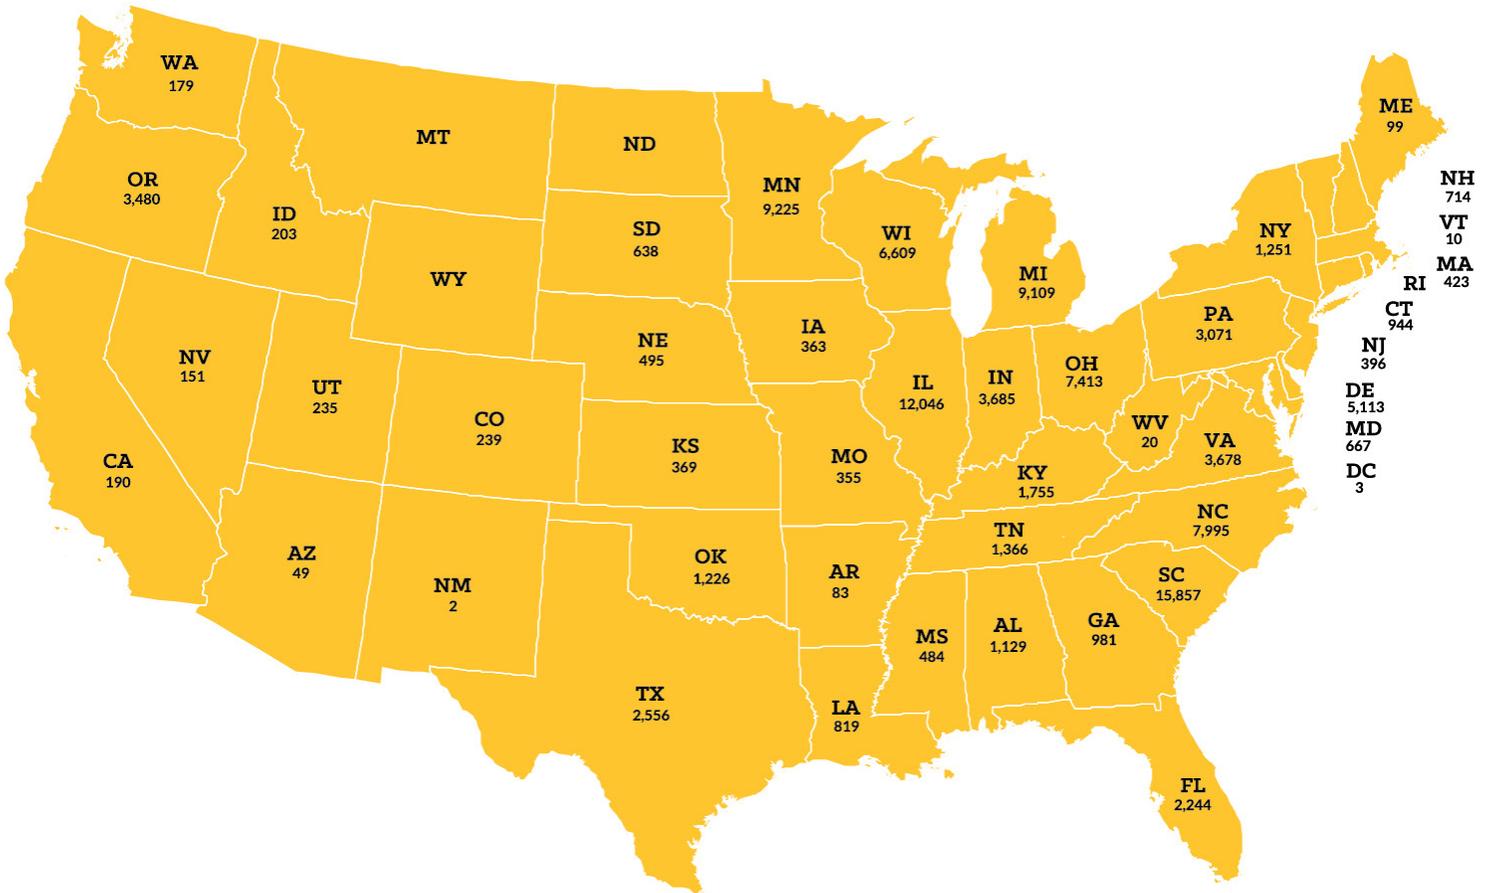

43% of all fire department engines and pumpers are at least 15 years old, down from 46% in 2010.

The Cost and Frequency of Natural Disasters Continues to Rise

TIME PERIOD	BILLION-DOLLAR DISASTERS	EVENTS/YEAR	COST	COST/YEAR	DEATHS
1980s (1980-1989)	29	2.9	\$178.1B	\$17.8B	2,870
1990s (1990-1999)	53	5.3	\$274.0B	\$27.4B	3,045
2000s (2000-2009)	62	6.2	\$519.0B	\$51.9B	3,091
2010s (2010-2019)	119	11.9	\$810.5B	\$81.1B	5,217
Last 5 Years (2016-2020)	81	16.2	\$606.9B	\$121.4B	3,969
Last 3 Years (2018-2020)	50	16.7	\$234.3B	\$78.1B	553
Last Year (2020)	22	22.0	\$95.0B	\$95.0B	262
All Years (1980-2020)	285	7.0	\$1,876.6B	\$45.8B	14,485

The chart above shows the number of disasters in the U.S. that have exceeded \$1 billion in the last four decades, last year, last three years, and last five years. It also reflects the total monetary and human cost of these disasters during these time periods, with cost per-year averages. During the 1980s, the total cost of these disasters was \$178.1 billion. During the 2010s, this number rose to \$810.5 billion. This represents an increase of over 355%.
